GASBARRE PRESS DIVISION

REBUILD Re-manufacturing Services

Gasbarre Products, Inc. has been rebuilding, re-manufacturing, and retrofitting presses for more than 28 years. We have the capability, capacity and expertise to rebuild entire press lines. Let Gasbarre bring your mechanical or hydraulic compacting or sizing presses back to specified performance levels.

Gasbarre's new 12,200 square foot state-of-the art Rebuild facility serves two primary purposes: Rebuild and re-manufacturing of mechanical and hydraulic presses of all sizes and manufacturing of new large tonnage Gasbarre presses.

Two large overhead cranes (40 ton and 20 ton lifting capacity) are installed for the handling of large equipment. The facility includes an enclosed "press cleanup" area for proper cleaning of the equipment to be rebuilt as it comes in the door. A railway system is used to transport the presses and components from bay-to-bay through the stages of disassembly and assembly for a more efficient material handling system.

Rebuild a single press or plan a program to rebuild an entire press line

Services

- Gasbarre press line rebuild and re-manufacturing
- Other manufacturer's press line rebuild and re-manufacturing
- Mechanical and hydraulic presses
- Capacities to 1200 tons
- Electrical packages incorporating today's state of the art technology
- Air clutch / brake unit installations
- Variable speed drives
- Tonnage monitors
- Incorporate features to meet today's safety standards

Benefits

- Process control improvement
- Increased productivity
- Lower toolin maintenance and replacement costs
- Lower press maintenance costs
- Increased press uptime
- Extends the service life of the equipment
- Offers benefits of safety with modern guarding and electrical operations
- Warranty is included
