

CAR BOTTOM FURNACES

J.L. Becker Car Bottom Furnaces are capable of achieving numerous metallurgical processes, including annealing, normalizing, quenching, speroidize annealing, stress relief and tempering. They can accommodate various heating types with a temperature range of 300-2200°F (149-1204°C) and a load capacity up to 100,000 lbs under atmosphere or air.

FEATURES

Heating: Temp Range: Insulation: Load Capacity: Atmospheres: Gas or Electric 300-2200°F (149-1204°C) Fiber, Brick or Castable Up to 100,000 lbs Nitrogen, Methanol, Endo Gas, Natural Gas, Ammonia or Air

EQUIPMENT CUSTOMIZATION

- PLC Control
- Recirculating Fans
- Computer Management System
- Variable Load Sizes and Capacities
- Manual or Automatic Load Systems
- Dual Car Loading Capability

STANDARD SIZES

| Max Load (lbs) | Width (ft) | Length (ft) | Height (ft) |
|----------------|------------|-------------|-------------|
| 10,000 | 8 | 16 | 6 |
| 20,000 | 8 | 20 | 6 |
| 40,000 | 12 | 30 | 8 |
| 60,000 | 12 | 30 | 10 |

Custom-engineered sizes are also available upon request.

Contact <u>sales@jlbecker.com</u> to find out how J.L. Becker can meet your specific thermal heating requirements and engineer your custom heat treating equipment today.
