EXPERT SERVICE FROM THE LEADER IN PRESS TECHNOLOGY

Press Services & Training
Advanced Powder Compaction
YOUR BUSINESS CHALLENGES

You run a tight ship. You need the right people onboard.

Powder compaction is a competitive business. Part art, part science, the knowledge that is carefully cultivated over a period of years and decades represents a distinct competitive advantage.

But what happens when that knowledge doesn’t exist? When the people who have built the business into what it is today decide to ride off into the sunset? Baby boomer retirements are exposing a dire issue: their replacements often do not have the experience required for the job. Just finding people with the right skills is expensive, and once found they are 35% more expensive than they were just ten years ago.

What can an owner or manager do to prepare their company for the road ahead—when labor will be more expensive, will hold less accrued knowledge, be harder to retain—and yet still hold the keys to company success?

There is a solution. Working with expert partners can be the answer to these challenges. Whether bringing in expertise as needed to accomplish defined tasks, using that expertise to train existing employees, or automating workflow to reduce dependence on a fluid workforce, top companies work with partners in a way that allows them to concentrate on their core mission—making quality parts.

The New Reality: Higher Compensation Cost, Decreased Retention, More Risk

Employees are expensive. Manufacturing compensation costs continue to increase.

Skilled replacements are harder to find and more expensive. Direct replacement costs can be 60% of annual pay.

Mistakes are more expensive. As of August 2016, OSHA increased fines for all categories of violation by nearly 80% (“Other than Serious” penalties are shown).

Knowledge is walking out the door. Baby Boomers represent 3 out of every 10 employees.

PLANNED PREVENTATIVE MAINTENANCE

Protect Your Investment. Improper maintenance is at the root of 70-80% of all equipment failures. Gasbarre’s expert technicians know the little signs that can indicate big problems are right around the corner. Top companies put our experience to work for them with the Gasbarre Preventative Maintenance Program.

ON-SITE TRAINING

Increase your knowledge. Gasbarre can make experts of your personnel. Training by industry leaders in the setup, operation, and maintenance of press equipment, conducted on customer site, under real-world conditions. Training is available for everyone from beginners to seasoned veterans looking to brush up on best practices. Training is tailored to provide attendees the knowledge they need to excel at their job. A smart investment in any workforce.

AUTOMATION

Reduce labor costs. Automation solutions from Gasbarre can streamline the manufacturing process and reduce labor expenses while increasing output. Our unique experience bridges powdered material processing and automation in a way few companies can.
